

# aim Signalling Providers

*Leading the way*

**"aim – working in partnership with the UK's leading signalling specialists to bring you the very latest in alarm monitoring technology."**

**Working in partnership with leading technology providers to deliver a secure signalling service**

The DualCom GradeShift® range provides installers with a single hardware platform which fits every grade of risk, from Grade 2, 3, 4 and Fire. DualCom's unique GradeShift® technology allows installers to shift between grades without changing the hardware.

#### Key Factors

- Multiple signalling paths, GSM, GPRS, PSTN and/or IP
- Fixed tariff means unlimited signals with no hidden charges (also incorporates Freefone telephone dialling)
- 100% Insurance company specified meeting all insurance grades
- No need for dedicated telephone line, can share with existing telephone line on any network
- Supplied fully programmed
- WorldSIM® Access all areas – access to all four mobile networks in a single product

[www.redcare.bt.com](http://www.redcare.bt.com)

Redcare is part of BT plc and has been a leader in the fire and security market for 25 years. Redcare is a specialist in secure, monitored communications services, which help customers to benefit from automated, intelligent decisions and responses.

#### Key Factors

- Multiple signalling paths, GSM, GPRS, PSTN and/or IP
- Redcare owns its own secure end-to-end network
- Employ a dedicated account team and 24x7 customer service and support
- Redcare signalling solutions are backed by the insurance industry and comply with British and European Standards for intruder and fire alarm signalling
- Redcare products have been independently tested by the BRE (British Research Establishment) and the LPCB (Loss Prevention Certification Board)

WebWay provides an alarm transmission service using shared public or private network connections. The service can reduce operational costs, increase security and provides remote fix capabilities for the system. The solution is designed to operate in any network topography, with no restriction on functionality or security.

#### Key Factors

- Integrated intruder, fire, audio and BMS signals
- IP and GPRS communications, monitored 24/7
- Serial data interface to alarm panel, advanced alarms and service
- Up to 48 channels and 3 controllable outputs
- GPRS roaming at no additional ongoing charges
- Engineer support, performance reports

## Delivering advanced signalling technologies with a difference

*aim are a customer led and technology driven organisation that is passionate about providing its customers with the latest leading edge monitoring technology and fast response service delivery. By developing strategic relationships with renowned companies, we bring together their distinctive attributes, and expertise to deliver advanced signalling technologies with a difference. Our working partnerships provide customers with the very latest state of the art signalling solutions.*

### Our Commitment to Quality

A commitment to the highest standards of quality assurance underlines everything that we do. These are some of our current accreditations and trade association memberships.
